Bursting Bubbles vs. Missing the Rallies: Which do you fear more?

During the months following the February 2020 market drawdown, bonds, commodities, and stocks have all had a remarkable run, leading many investors and advisors to contemplate both the prospect of asset bubbles and the portfolio implications of those bubbles bursting.

At the same time, powerful monetary and fiscal forces are contributing to broad price increases, creating FOMO for many investors and tempting them to put sidelined cash to work.
BONDS

For bond investors, interest income from the investment grade bond market has never been more expensive:

BLOOMBERG BARCLAYS US AGG INDEX: DOLLARS REQUIRED TO GENERATE $1 OF INTEREST INCOME

COMMODITIES

From its 2020 trough in April, the S&P GSCI has climbed 50%, due in part to the rise in the price of gold, which continues to hover near its all-time high:

GOLD $/OUNCE

STOCKS

In addition to being 50% higher from their low in March, U.S. equities are now trading at valuations near their tech-bubble peak:

S&P 500 FORWARD P/E RATIO
MONEY SUPPLY

Is it any coincidence that these market conditions and price increases are occurring in the wake of the fastest growth in money supply in 50 years?

For the 50 years ended December 31, 2019, the average 6-month growth rate of the M2 money supply was 3.3%. The most it grew during any 6-month period was 8.5% (in 1983). During the 6-month period ended June 30, 2020, M2 money supply grew at a whopping 18.7%:

USD

The increase in M2 has generated downward pressure on the US dollar, which in turn has contributed to significant flows into non-USD denominated assets. Since its all-time high on March 23, 2020, the Bloomberg US Dollar Index has fallen more than 9%:

BLOOMBERG US DOLLAR INDEX

These conditions appear to be raising the prospect of asset bubbles, leaving investors and advisors feeling increasingly jittery about being in the market.

For equity investors specifically, it’s reasonable to question how much this newly created money is propping up stock markets and how long it can continue.

At the same time, it can be difficult to simply sit on the sidelines and watch the market continue to climb higher, especially when the average money market fund is yielding just 0.07%.

WHAT TO DO?

The Milliman Managed Risk Strategy can be used to combat FOMO by enabling investors to stay invested and participate in potential upside, while also maintaining a dynamic risk management strategy, designed to limit portfolio volatility and reduce the effects of market drawdowns.
