Introduction

The management of Medicaid healthcare service delivery has taken on many forms during the past nearly 60 years since its inception. One of those forms, managed care, allows state Medicaid agencies to delegate the coordination of care and certain associated responsibilities to contracted entities. In these programs, managed care organizations (MCOs) contract with state Medicaid agencies to deliver and manage the healthcare benefits under the Medicaid program in exchange for predetermined capitation revenue. Although managed care has been utilized for several decades, the magnitude of its use has significantly expanded. Today, nearly every state utilizes some form of managed care, including comprehensive risk-based managed care, primary care case management, or limited-benefit plans. The form that accounts for the majority of Medicaid enrollment coverage is risk-based managed care, with approximately three out of every four members enrolled with a comprehensive managed care health plan in calendar year (CY) 2020.¹ Risk-based managed care continues to expand across the national Medicaid landscape and is the mechanism by which Medicaid recipients receive healthcare benefits, at least in part, in 40 or more states in the United States as well as the District of Columbia and Puerto Rico.

Although the introduction of the Patient Protection and Affordable Care Act (ACA) Medicaid expansion population resulted in substantial increases in the total number of Medicaid beneficiaries, enrollment levels began to flatten out or even decrease in certain programs prior to CY 2020. The enrollment stabilization was disrupted by the enrollment increases attributable to the public health emergency (PHE) declared during the COVID-19 pandemic. Pauses in Medicaid redetermination processes implemented by states to meet requirements for enhanced federal funding² resulted in material enrollment trend from CY 2019 through CY 2022. States were able to resume Medicaid redeterminations as soon as April 1, 2023,³ and some of the increases observed during the PHE are expected to be rolled back in CY 2023 and CY 2024. Forty states as well as the District of Columbia and Puerto Rico indicated that terminations resulting from redeterminations would begin by June 2023.⁴ In next year's version of this report, we anticipate reviewing the impact of resumed redeterminations on the MCO Medicaid enrollment and financials through CY 2023.

Most states require that a contracted MCO also be a licensed health maintenance organization (HMO), which includes the requirement to file a statutory annual statement with the state insurance regulator. The statutory HMO annual statement is a standard reporting structure developed and maintained by the National Association of Insurance Commissioners (NAIC), with prescribed definitions allowing comparisons among various reporting entities.

This report summarizes the CY 2022 experience for selected financial metrics of organizations reporting experience under the Title XIX Medicaid line of business on the NAIC annual statement.⁵ The information was compiled from the reported NAIC annual statements.⁶ Individual reporting entities may be excluded from this report for the following reasons:

- Did not submit a health annual statement
- Reported less than \$10 million in annual Medicaid (Title XIX) revenue
- Specialized behavioral health plan or long-term services and supports plan
- Premium revenues indicate a limited set of covered services
- Reported values appear to be influenced by unusual circumstances

⁵ Revenue amounts not listed under the Title XIX Medicaid line of business are considered non-Medicaid for purposes of this report. To the extent that CHIP or other Medicaid revenue is reported in a line of business other than Medicaid, these financial results may be excluded from this report.

⁶ National Association of Insurance Commissioners. Annual Statement Database, as delivered by S&P Global, Inc, all rights reserved.

- Otherwise omitted from the NAIC database of health annual statements utilized for this report

This report also includes information from six MCOs operating in the Arizona Medicaid program. Data for these MCOs was not available from the NAIC annual statement database but was obtained from direct contributors. We have noted limitations of the information from these MCOs where applicable in the report. A full list of reporting entities included in this analysis is provided in Appendix 5.

The primary purpose of this report is to provide reference and benchmarking information for certain key financial metrics used in routine analysis of Medicaid MCO financial performance. The financial results are summarized on a composite basis for all reporting MCOs. This report provides differences among various types of MCOs using available attributes defined in the reported financial statements.

This is the 15th annual iteration of this report, reflecting financial information reported by the MCOs for CY 2022. Previous versions of this report can be obtained from the Milliman website. The methodology used to generate this report is substantially consistent with the previous years' reports.

The body of this report contains summarized and detailed results of the analysis. The following appendices provide additional data that may be of interest to report users:

Appendix 1 provides additional detail and stratifications of the financial metrics presented in this report.

Appendix 2 provides the methodology and assumptions utilized in developing the metrics presented in this report.

Appendix 3 provides a mapping of Centers for Medicare and Medicaid Services (CMS) regions.

Appendix 4 provides a summary of state-by-state financial metrics.⁷

Appendix 5 provides the listing of each MCO included in the report, as well as the company attributes assumed for purposes of the MCO groupings included in this report.

⁷ MCO annual enrollment, written premiums, and incurred claims by state were used to allocate MCO experience by state. This is different from other sections of the report, where an MCO's entire experience was allocated to a single state or region.

Summary of CY 2022 financial results

The CY 2022 financial information analyzed for this report comprises information for 185 reporting entities across 37 states, the District of Columbia, and Puerto Rico. The financial data for all MCOs was compiled to produce outcomes of key financial metrics for various company groupings. The distribution of results is summarized in this report to allow for user reference and benchmarking purposes.

The primary financial metrics analyzed for this report include the medical loss ratio (MLR), administrative loss ratio (ALR), underwriting ratio (UW ratio), and risk-based capital (RBC) ratio. These selected metrics focus primarily on the income statement values of the financial statement, with the exception of the RBC ratio, which is a capital (or solvency) measure. The methodology and formulas behind these metrics are documented in Appendix 2. This section summarizes financial results reported under the Medicaid Title XIX line of business on page 7 of the NAIC annual statement.

Figure 1 summarizes the composite CY 2022 financial results for the 185 companies meeting the criteria selected for this study. The MCOs analyzed in this report recorded \$276.1 billion dollars in revenue and achieved composite underwriting gains of 3.3% in CY 2022. This year represents the third consecutive report observing a composite underwriting gain of at least 3.0%, following composite underwriting gains of 3.0% and 3.5% in CY 2020 and CY 2021, respectively.

FIGURE 1: COMPOSITE CY 2022 FINANCIAL RESULTS

Notes:

- (1) Values have been rounded.
- (2) Taxes and fees estimated based on a subset of the nationwide results.

The aggregate 3.3% underwriting gain is greater than the range of assumptions typically used in capitation rate development.⁸ Some of the enrollment growth and influences of the COVID-19 pandemic have likely led to increased underwriting gains over the last several years. Although MCO capitation rates in CY 2021 and CY 2022 were

⁸ Society of Actuaries (March 2017). Medicaid Managed Care Organizations: Considerations in Calculating Margin in Rate Setting. Retrieved June 28, 2023, from <https://www.soa.org/research-reports/2017/medicaid-margins/>.

generally developed after the onset of the COVID-19 pandemic, there continues to be uncertainty regarding the ultimate impact of COVID-19 on enrollment growth, member behavior, and Medicaid claims experience.

Figure 2 provides a distribution of the number of MCOs within ranges of underwriting ratios specific to CY 2022. MCOs with underwriting gains are shown in green, and those with underwriting losses are shown in blue. As Figure 2 shows, 161 out of 185 MCOs reported gains for CY 2022.

FIGURE 2: CY 2022 UNDERWRITING RATIO DISTRIBUTION

In CY 2022, 87% of MCOs included in this analysis reported a positive underwriting gain, an increase compared to 83% of MCOs reporting underwriting gains in CY 2021 and the highest percentage since the inception of this report. The distribution of underwriting results continues to be narrower relative to financial results prior to the onset of the pandemic, with over 80% of MCOs reporting an underwriting margin between (2.0%) and 8.0% in each of the last two years. Historically, approximately 70% to 75% of MCOs had underwriting gains in this range prior to the pandemic. The distribution of underwriting results in CY 2021 and CY 2022 may be affected by implementation of CMS's recommendation of a "2-sided risk mitigation strategy for rating periods impacted by the public health emergency."⁹ This is consistent with an observed increase in reported aggregate health policy reserves potentially related to risk mitigation mechanisms for MCOs from CY 2020 through CY 2022.

Over the past five years, Medicaid managed care revenue underlying this analysis grew by over 50%. Among the 179 MCOs that were included in both the CY 2022 and CY 2021 reports, average monthly membership increased over 11% from CY 2021 to CY 2022.¹⁰ As indicated earlier, Medicaid enrollment continued to increase significantly in CY 2022 due to paused Medicaid enrollment redeterminations.¹¹ We anticipate that enrollment will begin to decrease during CY 2023 into CY 2024 as redeterminations resume, but the timing and impact of these changes may vary by

state. Figure 3 summarizes the composite financial results for the most recent five-year period. The mix of MCOs varies by year; however, the criteria used to select the companies are consistent from year to year.

FIGURE 3: FIVE-YEAR HISTORICAL FINANCIAL RESULTS

Notes:

- (1) Values have been rounded.
- (2) Estimated CMS MLR developed to approximate the prescribed CMS MLR calculation.

The following observations on the Medicaid managed care market over the most recent five years may be inferred from Figure 3:

- For CY 2018 and CY 2019, the composite underwriting ratio was less than 1.0%. In CY 2020 the underwriting ratio increased to 3.0% and then further increased to 3.5% in CY 2021 following the onset of the COVID-19 pandemic. The underwriting ratio was sustained above 3.0% in CY 2022.
- The composite CMS MLR (which is adjusted for taxes) has remained just below 90% from CY 2020 through CY 2022 after being notably higher in prior years.
- The fluctuating year-over-year change in ALR is directly correlated with MCO-reported taxes and fees, which may be driven by the health insurance providers fee (HIPF) effective in CY 2018 and CY 2020. Variances in the timing of how state Medicaid agencies reimburse MCOs for taxes and fees incurred and how the MCOs accrue this revenue and associated liability may impact the extent to which the HIPF is reflected within a given calendar year.
- While RBC ratios were around 400% in CY 2018 and CY 2019, the RBC ratio has increased from 396% in CY 2019 to 492% in CY 2021, the highest level we have observed in the last 10 years. The CY 2022 RBC levels are relatively consistent with CY 2021 RBC levels.

The MLR calculated using information obtained from the annual statements is different from the CMS MLR calculated in accordance with 42 CFR 438.8. To provide a relevant comparison to the CMS MLR, we developed an estimate using the definition prescribed in CMS-2390-F by adjusting for quality improvement expenditures in the numerator and removing applicable taxes and fees in the denominator.

This estimated CMS MLR represents an approximate 4% to 5% increase over the composite MLR calculated directly from the financial statements. Based on the estimated CMS MLR calculation, approximately 80% of the MCOs analyzed in this report would be at or above an 85% MLR in CY 2022. The 85% threshold is significant because states opting to implement a minimum MLR requirement must do so at or above 85% in their MCO contracts, and the certified capitation rates must project an MLR of 85% or higher.¹² The reader should note that the MLR calculated throughout the remainder of this report is based on the MLR formula as defined in Appendix 2 and not the estimated CMS MLR described above.

While Figure 3 illustrates the overall changes in the underwriting results over the last five years, it is also important to understand how the underwriting results have varied across MCOs. Figure 4 illustrates the distribution of underwriting results in the Medicaid managed care market for each calendar year from the MCOs included in our analysis.

FIGURE 4: DISTRIBUTION OF UNDERWRITING RESULTS BY YEAR

Notes:

- (1) The distribution is weighted by the revenue associated with each MCO's corresponding underwriting results.
- (2) Values have been rounded.

The percentage of revenue attributable to MCOs that reported losses was highest over the last five years in CY 2019, at 47.5%. However, the percentage of revenue associated with MCOs reporting a loss decreased to only 9.8% in CY 2022, contributing to the increases in composite underwriting gains observed in the last three years. In addition, revenue associated with MCOs reporting 5% or more in underwriting gains increased from 7.9% in CY 2019 to 25.2%, 35.2%, and 29.6% in CY 2020, CY 2021, and CY 2022, respectively.

Appendix 4 provides a summary of the underwriting ratio and other financial metrics analyzed in our report on a state-by-state basis.

¹² 42 CFR § 438.4 (b)(9).

Administrative cost analysis

MEDICAID-FOCUSED AND MEDICAID-OTHER MCOS

The previous section of this report contains analysis of key financial metrics for 185 MCOs that reported operations in the Medicaid Title XIX line of business, based on page 7 of the NAIC annual statement (Analysis of Operations by Line of Business). This section examines the administrative expenses reported by the MCOs on the Underwriting and Investment Exhibit Part 3 – Analysis of Expenses page. Because this information is only reported at an aggregate MCO level, detailed administrative expense information is not stratified by line of business (e.g., Medicaid). Thus, the results presented in this section of the report are limited to the 75 MCOs that reported 90% or more of their total revenue from the Medicaid line of business, which we have defined as “Medicaid-focused.” These 75 Medicaid-focused MCOs account for approximately 43% of the Medicaid revenue summarized for purposes of this report.

Both the 75 Medicaid-focused MCOs and the other 110 MCOs reported a composite administrative loss ratio of nearly 11% (10.8% and 10.9%, respectively). The 75 Medicaid-focused MCOs reported an 8.1% ALR net of taxes and fees. The information received for the Arizona MCOs was obtained outside of the NAIC annual statement information and did not contain the level of administrative cost detail necessary to develop the metrics illustrated in this report and are not included in the count of 75 Medicaid-focused MCOs.

The remainder of this section summarizes the reported administrative costs for only the Medicaid-focused MCOs.

SUMMARY OF RESULTS

The primary expense categories that are used in the Analysis of Operations by Line of Business page include the claim adjustment expenses (CAE) and general administrative expenses (GAE). The CAE and GAE categories are further stratified by additional subcategories of expenses in the Underwriting and Investment Exhibit Part 3 – Analysis of Expenses page, which is the basis of the administrative expense categories illustrated in this administrative cost analysis.

Figure 5 summarizes the CY 2022 administrative expenses by quartile of ALR net of taxes and fees for the 75 Medicaid-focused MCOs. The administrative expenses are stratified by administrative cost categories summarized from the Underwriting and Investment Exhibit Part 3 – Analysis of Expenses page.¹³

FIGURE 5: ADMINISTRATIVE LOSS RATIO NET OF TAXES AND FEES BY QUARTILE OF ALR PERFORMANCE

Note: Values have been rounded. The ALR net of taxes and fees excludes taxes and fees from the numerator and denominator of the ALR calculation.

¹³ Further information on the administrative expense category classification is available in Appendix 2.

Human capital (costs related to salaries, wages, and other items specific to in-house staffing resources) accounted for the majority of the increase in administrative costs from quartile to quartile, although other expense types also increased steadily by quartile. Notably, the fourth quartile of MCOs actually had lower human capital expenses than the third quartile; these MCOs instead had much more in “Outsourcing” and “Other” expenses, which included write-in expenses such as prepaids and other miscellaneous receivables.

Figures 6 and 7 summarize the administrative cost per member per month (PMPM) net of taxes and fees and ALR net of taxes and fees for the most recent five-year period. Unlike other figures in this report illustrating multiple years of financial results across all MCOs, the financial information included in Figures 6 and 7 has been limited to a consistent set of 56 Medicaid-focused MCOs that were included in all years between CY 2018 and CY 2022. This limitation facilitates a more consistent review of the year-over-year administrative cost changes experienced by a cohort group of MCOs.

FIGURE 6: ADMINISTRATIVE COST PMPM (NET OF TAXES AND FEES) BY YEAR

FIGURE 7: ADMINISTRATIVE LOSS RATIO (NET OF TAXES AND FEES) BY YEAR

Note: The ALR net of taxes and fees excludes taxes and fees from the numerator and denominator of the ALR calculation.

The reported mean administrative cost PMPM increased from CY 2018 to CY 2020 before decreasing in CY 2021, followed by a moderate increase in CY 2022, as shown in Figure 6. The administrative cost PMPMs in both CY 2021 and CY 2022 are lower than in CY 2020. A potential explanation for this is that certain fixed administrative costs may be spread over an increased membership base caused by the pause in Medicaid enrollment redetermination.

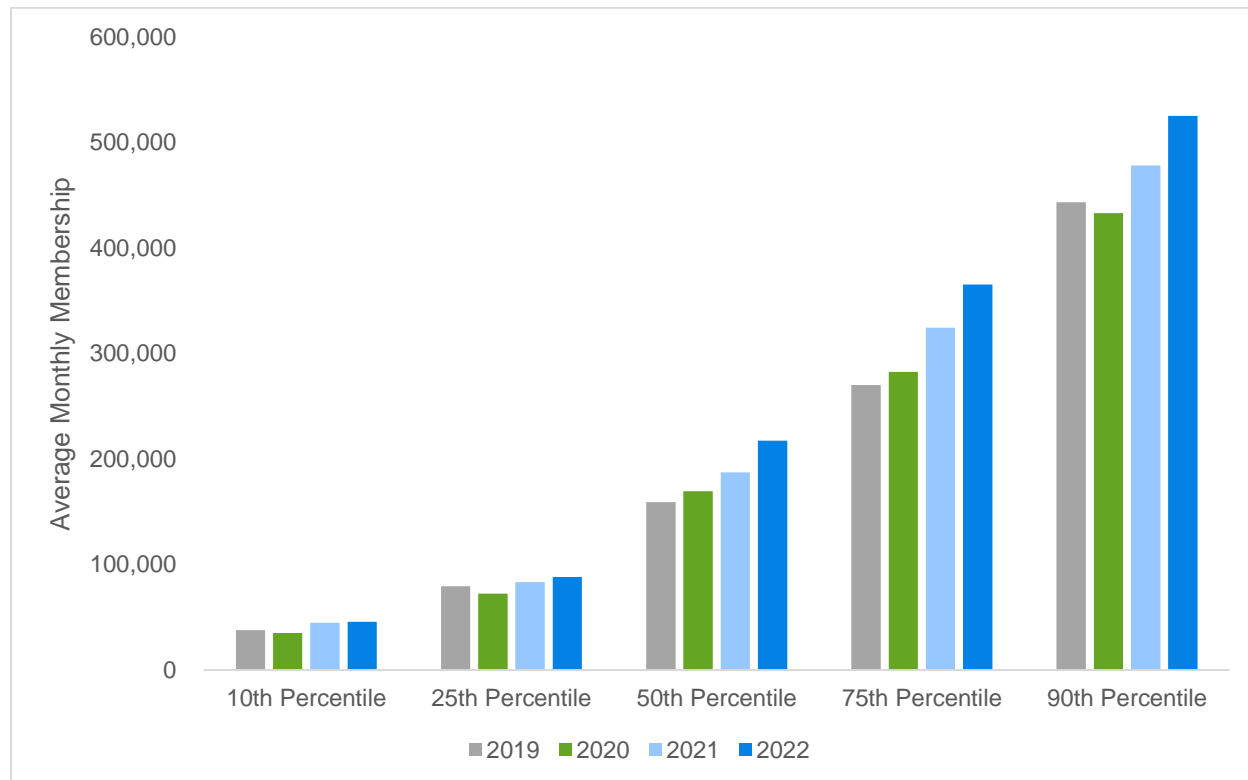

In contrast, Figure 7 shows that the ALR net of taxes and fees has remained stable and generally decreased over the past five years. The PMPM increases observed in Figure 6 from CY 2018 to CY 2020 are likely attributable to general inflationary trends as well as changes in the membership composition covered by the MCOs in this study (such as increases in disabled beneficiaries and beneficiaries requiring long-term services and supports in managed care programs, which have higher-than-average claim and administrative costs).

The ALR net of taxes and fees, illustrated in Figure 7, has not increased at the same rate. This may be explained, in part, by an increase in the mix of higher-acuity populations into managed care, whose administrative costs are generally lower as a percentage of revenue. It is interesting to note, however, that this trend has not reversed in CY 2020 through CY 2022, when enrollment trends increased for able adults with the pause in Medicaid redeterminations. While higher-acuity populations generally require greater administrative resources on a per member basis, the administrative expense is generally a smaller proportion of the total premium for these populations.

Changes in Medicaid MCO enrollment

The enrolled membership of Medicaid MCOs varies significantly from state to state and by MCO. Based on CY 2022 reported information, some Medicaid programs included local HMOs with under 20,000 average monthly members while there were also MCOs with over 1,000,000 average monthly members. Thus, impacts of particular changes or events can materially differ even for MCOs in the same program based on their economies of scale or covered population mix. Medicaid enrollment included in this report has increased over 36% from CY 2019 to CY 2022. Figure 8 shows this enrollment variation by organizing the MCOs into enrollment-based percentiles and also illustrates the year-to-year enrollment increase seen since the pause in Medicaid redeterminations.

FIGURE 8: AVERAGE MONTHLY MEMBERSHIP PERCENTILES BY YEAR

Notes:

- (1) Average monthly membership is calculated by dividing the Schedule T reported Medicaid member months by 12.
- (2) MCO enrollment is illustrated at statutory statement reporting levels. Certain MCOs are a part of larger parent organizations.

The 10th percentile of MCOs had approximately 35,000 members in CY 2020 prior to increasing to nearly 46,000 members in CY 2022, representing a 30% increase in membership. MCOs at this end of the spectrum could potentially have recently entered a particular Medicaid market, have market share in other lines of business, or be a locally focused health plan. The 25th percentile, 50th percentile, 75th percentile, and 90th percentile membership increased by 22%, 28%, 29%, and 21%, respectively, from CY 2020 to CY 2022.

In the CY 2018 version of this report, we examined how administrative expenses and underwriting gains have historically varied by parent company Medicaid revenue.¹⁴ We found that, historically, administrative loss ratios tended to be higher for MCOs with less revenue, likely attributable to economies of scale for larger organizations. We also found that administrative costs seemed to stabilize at certain parent revenue levels. Similarly, Figure 9 illustrates administrative expenses for various percentiles of MCO membership over the last four years. Figure 9 shows the

¹⁴ See <https://www.milliman.com/en/insight/medicaid-managed-care-financial-results-for-2018>.

average ALR net of taxes and fees based on the MCO's 2022 MCO size percentile. To be consistent in comparing year-to-year data, we limited to MCOs that were included in the report each year between CY 2019 and CY 2022.

FIGURE 9: AVERAGE ADMINISTRATIVE LOSS RATIO NET OF TAXES AND FEES BY YEAR AND MCO SIZE PERCENTILE

Notes:

- (1) Only Medicaid-focused MCOs appearing in the report each year between CY 2019 and CY 2022 are included above. These MCOs are defined as Medicaid-focused if at least 90% of their CY 2022 total revenue was reported under the Medicaid line of business.
- (2) MCOs are categorized based on their CY 2022 size percentile.
- (3) Each MCO is weighted equally when calculating the average.

The ALR net of taxes for MCOs in the bottom 10th percentile of membership had the highest average ALR net of taxes in each of the four years examined above. However, the average administrative costs for this group notably decreased in each year between CY 2019 and CY 2022 and trended closer to the performance of larger MCOs each year. This could be explained, in part, by increasing enrollment (the bottom 10th percentile of membership increased 30% from CY 2020 to CY 2022), which may have resulted in additional economies of scale to smaller MCOs. It will be interesting to see how the administrative costs of these smallest MCOs are affected by eligibility redeterminations.

The other percentile groups were more stable (both in comparison to each other and year-to-year). We did not observe the largest MCOs report materially lower ALRs net of taxes than other groups, as the MCOs in the top 10th percentile reported similar administrative costs as the 50th through 89th percentiles. This finding is similar to the CY 2018 report observation of administrative costs being high for low-revenue MCOs but stabilizing at certain MCO revenue levels.

Conclusion

Since the onset of the COVID-19 pandemic, Medicaid managed care plans have experienced material enrollment growth and sustained underwriting gains at 3% or above, on average. The PHE remained in effect throughout 2022 but came to an end on May 11, 2023. There is uncertainty surrounding the impact of resumed Medicaid redeterminations by state. Enrollment is expected to decline for MCOs during this time, and it remains to be seen how the financial performance of MCOs will fare as disenrollment activities resume. Will underwriting margins and administrative expenses return to pre-COVID-19 levels, or will they remain at levels observed in recent years? Will states continue the risk-sharing mechanisms (such as risk corridors) that they adopted after the onset of COVID-19?

The results in this report provide reference and benchmarking information for certain key financial metrics used in the analysis of Medicaid MCO financial performance. It will be important for state Medicaid program administrators and their MCOs to continue to monitor the emerging experience and understand the impact of population changes and other external factors in the financial management of their programs.

Limitations and data reliance

The results contained in this report were compiled using data and information obtained from the statutory annual statements for Medicaid MCOs filed with the respective state insurance regulators. The annual statements were retrieved as of June 6, 2023, from an online database along with information collected from additional external sources. In addition to the criteria used to select companies in this report, certain MCOs may be omitted from this report because of the timing of annual statement submissions or exclusions from the online database. For example, California is known to operate managed care programs, but California MCOs are not included in this report because their statements do not conform to the NAIC reporting standards.

Milliman has developed certain models to estimate the values included in this report. The intent of the models was to estimate the MCO financial results presented in this report. We have reviewed the models, including their inputs, calculations, and outputs, for consistency, reasonableness, and appropriateness to the intended purpose and in compliance with generally accepted actuarial practice and relevant actuarial standards of practice (ASOP). The models rely on data and information as input to the models. We have relied upon certain data and information for this purpose and accepted it without audit. To the extent that the data and information provided is not accurate, or is not complete, the values provided in this correspondence may likewise be inaccurate or incomplete. Milliman's data and information reliance includes the NAIC annual statement database. The models, including all input, calculations, and output, may not be appropriate for any other purpose.

This report is intended for informational purposes only. Milliman makes no representations or warranties regarding the contents of this report. Likewise, readers of this report are instructed that they are to place no reliance upon this report that would result in the creation of any duty or liability under any theory of law by Milliman or its employees to third parties.

The views expressed in this research report are made by the authors and do not represent the opinions of Milliman, Inc. Other Milliman consultants may hold alternative views and reach different conclusions.

Qualifications

Guidelines issued by the American Academy of Actuaries require actuaries to include their professional qualifications in all actuarial communications. The authors are members of the American Academy of Actuaries and meet the qualification standards for performing the analyses in this report.

Appendix 1: Financial metrics and MCO characteristics

In addition to the figures illustrated in the body of this report, we have analyzed the financial metrics stratified by certain MCO characteristics to understand the potential impact these characteristics have on the reported financial results. The figures in Appendix 1 illustrate the following financial metrics and MCO characteristics:

FINANCIAL METRICS

- Medical loss ratio
- Underwriting ratio
- Risk-based capital ratio
- Administrative loss ratio
- Administrative loss ratio net of taxes and fees (Medicaid-focused MCOs only)
- Administrative PMPM net of taxes and fees (Medicaid-focused MCOs only)

MCO CHARACTERISTICS

- CMS region (see chart in Appendix 3)
- Annual Medicaid revenue
- Annual Medicaid revenue PMPM
- MCO type (Medicaid-focused versus all other MCOs)
- MCOs operating in five or more states
- MCO financial structure
- State Medicaid expansion status
- Underwriting gain/(loss) position

FIGURE 10: MEDICAL LOSS RATIO: CY 2022 RESULTS

Note: This table is limited to Medicaid-focused MCOs. Arizona MCOs were excluded from this table, as detailed administrative cost information was not available.

Appendix 2: Definition of financial metrics

The financial metrics calculated for purposes of this report include the medical loss ratio (MLR), underwriting ratio (UW ratio), risk-based capital ratio (RBC ratio), administrative loss ratio (ALR), and administrative cost PMPM. These selected metrics focus primarily on the income statement values of the financial statement, with the exception of the RBC ratio, which is a capital (or solvency) measure.

The financial metrics selected encompass five of the primary ratios used by managed care organizations (MCOs), state Medicaid agencies, and other stakeholders to evaluate the financial performance of an MCO. The metrics are defined in greater detail below.

MEDICAL LOSS RATIO (MLR)

MLR is a common financial metric used to report and benchmark the financial performance of an MCO. The MLR represents the proportion of revenue that was used by the MCO to fund claim expenses. The MLR is stated as a percentage, with claim expense in the numerator and revenue in the denominator.

In terms of the statutory annual statement, the MLR was defined as follows:

MLR =	$\frac{\text{Total Hospital and Medical Expenses} + \text{Increase in Reserves for A\&H Contracts}}{\text{Total Revenue}}$
Where:	<p>Total Hospital and Medical Expenses: Title XIX–Medicaid (P.7, L.17, C.8)</p> <p>Increase in Reserves for Accident and Health (A&H) Contracts: Title XIX–Medicaid (P.7, L.21, C.8)</p> <p>Total Revenue: Title XIX–Medicaid (P.7, L.7, C.8)</p>

Certain states include pass-through type programs such as franchise fees or provider taxes. This would also include amounts related to the health insurer assessment fee and applicable income tax gross-ups. These items may or may not be included in the total revenue reported by the MCO because the reporting practices vary among plans. If reported in the total revenue, there should be a corresponding offset amount included in the administrative costs for this as well.

Actuaries and financial analysts use the MLR as a measure of premium adequacy and often compare the resulting MLR with a “target” level. The MLR alone is not sufficient to compare MCO financial results among various states and programs. The target loss ratios (the claim cost included in the premium or capitation rate) vary by state and populations enrolled. Additionally, there may be reporting differences among MCOs as to what is classified as medical expense versus administrative expense.

As previously noted, the definition of MLR for purposes of this report may not be consistent with other definitions, in particular the Medicaid and Children’s Health Insurance Program (CHIP) managed care final rule (CMS-2390-F). The Medicaid and CHIP managed care final rule allows for the reduction of taxes, licensing, and regulatory fees from the revenue and a credibility adjustment, as well as the addition of quality improvement expenditures to the hospital and medical expenses in the numerator. The estimated CMS MLR in Figure 3 of this report above includes a 2% adjustment for quality improvement expenditures and removal of estimated Medicaid taxes, licensing, and regulatory fees from the revenue, which generally results in an additional 4% to 5% increase in the CMS MLR. However, other provisions, such as the exclusion of pass-through payments from the numerator and denominator of the MLR formula, could decrease the MLR percentage.

UNDERWRITING RATIO (UW RATIO)

The UW ratio is the sum of the MLR and the ALR (defined below) subtracted from 100%. A positive UW ratio indicates a financial gain, while a negative UW ratio indicates a loss. This financial metric is used to report and benchmark the financial performance of an MCO in consideration of both medical and administrative expenses. The UW ratio represents the proportion of revenue that was “left over” to fund the MCO’s contribution to surplus and profit after funding medical and administrative expenses. The UW ratio is stated as a percentage, with total underwriting gain or loss in the numerator and revenue in the denominator.

In terms of the statutory annual statement, the UW ratio was defined as follows:

UW Ratio =	$\frac{\text{Net Underwriting Gain or (Loss)}}{\text{Total Revenue}}$
Where:	Net Underwriting Gain or (Loss): Title XIX–Medicaid (P.7, L.24, C.8) Total Revenue: Title XIX–Medicaid (P.7, L.7, C.8)

The UW ratio is focused on the income from operations and excludes consideration of investment income and income taxes. The UW ratio requires interpretation and considerations similar in nature to the MLR and ALR metrics.

RISK-BASED CAPITAL RATIO (RBC RATIO)

The RBC ratio is a financial metric used by many insurance regulators to monitor the solvency of the MCOs. The RBC ratio represents the proportion of the required minimum capital that is held by the MCO as of a specific date (the end of the financial reporting period). The RBC ratio is stated as a percentage or a ratio, with total adjusted capital (TAC) in the numerator and authorized control level (ACL) in the denominator.

The NAIC prescribes a specific formula to develop both the TAC and the ACL. Further, the MCO is subjected to various action levels based on the resulting RBC ratio, as follows:

- Company action level (TAC is between 150% and 200% of the ACL RBC)
- Regulatory action level (TAC is between 100% and 150% of the ACL RBC)
- Authorized control level (TAC is between 70% and 100% of the ACL RBC)
- Mandatory control level (TAC is less than 70% of the ACL RBC)

Further details and discussion of the RBC requirements may be found at the NAIC website.¹⁵

In terms of the statutory annual statement, the RBC ratio was defined as follows:

RBC Ratio =	$\frac{\text{Total Adjusted Capital}}{\text{Authorized Control Level}}$
Where:	Total Adjusted Capital: Total Adjusted Capital–Current Year (P.28, L.14, C.1) Authorized Control Level: Authorized Control Level–Current Year (P.28, L.15, C.1)

Note: The RBC ratio is not unique to the Medicaid Title XIX line of business as it is calculated at the company level. Therefore, companies reporting non-Medicaid business will reflect composite RBC ratios for all lines of business within the reported legal entity.

ADMINISTRATIVE LOSS RATIO (ALR)

ALR is also a common financial metric used to report and benchmark the financial performance of an MCO. The ALR represents the proportion of revenue that was used by the MCO to fund administrative expenses. The ALR is stated as a percentage, with administrative expense in the numerator and revenue in the denominator.

In terms of the statutory annual statement, the ALR was defined as follows:

ALR =	$\frac{\text{Claim Adjustment Expenses (CAE) + General Administrative Expenses (GAE)}}{\text{Total Revenue}}$
Where:	Claim Adjustment Expenses: Title XIX–Medicaid (P.7, L.19, C.8) General Administrative Expenses: Title XIX–Medicaid (P.7, L.20, C.8) Total Revenue: Title XIX–Medicaid (P.7, L.7, C.8)

The ALR requires interpretation and considerations similar in nature to the MLR metric outlined above, most notably impacted by the state and federal taxes levied on MCOs across the different states. The ALR net of taxes and fees was estimated for Medicaid-focused MCOs by distributing the total Medicaid CAE and GAE expenses by the expense

¹⁵ See <https://www.naic.org/>.

allocation reported on the Underwriting and Investment Exhibit Part 3 – Analysis of Expenses page and then subtracting out the estimated taxes. The ALR values net of taxes and fees illustrated in this report were calculated by excluding taxes and fees from both the numerator and denominator of the ALR formula.

ADMINISTRATIVE COST PMPM

The administrative cost PMPM is the second metric for analyzing administrative expenses because of the fixed cost nature of certain components of the administrative expense. The administrative cost PMPM was defined as follows:

Admin PMPM =	$\frac{\text{Claim Adjustment Expenses} + \text{General Administrative Expenses}}{\text{Current Year Member Months}}$
Where:	<p>Claim Adjustment Expenses: Title XIX-Medicaid (P.7, L.19, C.8)</p> <p>General Administrative Expenses: Title XIX-Medicaid (P.7, L.20, C.8)</p> <p>Current Year Member Months: Title XIX-Medicaid (P.30 GT, L.6, C.9)</p>

The administrative cost PMPM net of taxes and fees illustrated in this report estimated the taxes and fees consistently with the methodology utilized for the ALR net of taxes and fees.

ADMINISTRATIVE EXPENSE CATEGORIES

The administrative expenses reported on the Underwriting and Investment Exhibit Part 3 – Analysis of Expenses page are broken out into 25 specific line items. These line items were grouped into five administrative expense categories to better illustrate the components of administrative cost incurred by the MCOs. The subcategories were selected to be intuitive groupings as well as meaningful with respect to their relative magnitudes. The following descriptions outline each administrative expense category:

- Human capital: Administrative costs associated with the employment of MCO staff.
- Outsourcing: Administrative costs associated with functions outsourced to a third party.
- Operating expenses: Administrative costs associated with the day-to-day costs of running the MCO.
- Taxes and fees: Administrative costs associated with taxes and fees incurred by the MCO. Payroll taxes were assigned to the human capital category. Real estate taxes were assigned to the operating expenses category. Federal and state income taxes are not included on the Underwriting and Investment Exhibit Part 3 – Analysis of Expenses page, and are not included in this administrative expense category.
- Other expenses: Administrative costs for aggregate write-ins.

The Underwriting and Investment Exhibit Part 3 – Analysis of Expenses page illustrates administrative expenses across all lines of business. Throughout the figures illustrated in this report, the administrative costs in each administrative expense category were proportionally adjusted so the total Medicaid administrative expenses would match the amounts reported on the Analysis of Operations by Line of Business page.

Additionally, line 19 and line 20 of the Underwriting and Investment Exhibit Part 3 – Analysis of Expenses page, “Reimbursements by uninsured plans” and “Reimbursements from fiscal intermediaries,” were excluded from the administrative cost grouping, because these lines would likely be attributable to non-Medicaid business.

FIGURE 16: ADMINISTRATIVE CATEGORY DEFINITION

ADMINISTRATIVE EXPENSE BREAKDOWN		U&I EXHIBIT PART 3 EXPENSES (COLUMNS 3-4)
HUMAN CAPITAL	SALARIES, WAGES, AND OTHER BENEFITS	LINE 2
	BOARDS, BUREAUS, AND ASSOCIATION FEES	LINE 15

EXCLUDED ¹⁶	REIMBURSEMENTS BY UNINSURED PLANS	LINE 19
	REIMBURSEMENTS FROM FISCAL INTERMEDIARIES	LINE 20

¹⁶ These administrative expenses are excluded for purposes of allocating the expenses only; the actual Medicaid administrative expenses reported were not adjusted.

Appendix 3: CMS regions

Appendix 4: Financial results by state

While the Medicaid managed care financial results are more stable at a nationwide level, the financial results may vary significantly from state to state. Figure 17 provides the average MLR, ALR, UW ratio, and RBC ratio for each state or territory with at least one MCO included in this analysis. For MCOs operating in multiple states, we allocated enrollment, premiums, and expenditures to each MCO's operating states in this appendix. As a result, the total number of plans illustrated below is not equal to the total illustrated in other sections of this report. Additionally, certain MCOs operating in a state's Medicaid managed care program may not be included due to the reasons described earlier in this report.

Acknowledgments

The authors gratefully acknowledge Rachel Kullman, FSA, MAAA, principal and consulting actuary in the Seattle office of Milliman, for her peer review and comments during the writing of this report.

Additionally, the authors express gratitude to Julian Boes in the Indianapolis office of Milliman for his data mining and analytical support during the writing of this report.

Milliman is among the world's largest providers of actuarial and related products and services. The firm has consulting practices in life insurance and financial services, property & casualty insurance, healthcare, and employee benefits. Founded in 1947, Milliman is an independent firm with offices in major cities around the globe.
