Economic recovery for public pensions continues in May

Second consecutive month of strong returns pushes funded ratio to 71.3% as funded status improves by $72 billion in May 2020

2.68% return for May 2020

Most sectors of the market continued their COVID-19 recovery from April into May, somewhat easing the financial impact of the February / March market downturn. The estimated funded status of the 100 largest U.S. public pension plans as measured by the Milliman 100 Public Pension Funding Index (PPFI) improved to 71.3%, up from 69.8% at the end of April 2020, and a significant recovery from 66.0% at the end of March 2020.

In aggregate, the PPFI plans experienced a second consecutive positive month since the COVID-19 economic crash in Q1, posting investment returns of 2.68% in May. The Milliman 100 PPFI asset value grew from $3.750 trillion at the end of April to $3.836 trillion at the end of May.

We estimate that the aggregate deficit shrank from $1.619 trillion at the end of April 2020 to $1.547 trillion at the end of May 2020, a $72 billion improvement.
